

Two (2) Fibers Detachable DVI Extension Module, M1-201DA

Description

The Digital Visual Interface is a high-quality, uncompressed data link between a host processor video card and a display peripheral. Optical technology for this transmission stretches the performance beyond the limitations of copper wire with longer length, data security, negligible RFI/EMI and the elimination of costly analog distribution systems.

The EDID in a display can be read and restored by just plugging it to the display. This self EDID programming feature makes the installation of M1-201DA-TR easier and more flexible with any resolutions in the display systems.

The four (4) optical data, Red, Green, Blue and clock are multiplexed and de-multiplexed through CWDM optical module. Graphic data can be extended up to 500meters (1,640feet) at 2K resolution over two (2) LC multi-mode fibers or 1,500meters (4,920ft) at WUXGA resolution (1900x1200) of 60Hz vertical refresh rate over two (2) LC single-mode fibers.

An external power adapter is required for the receiver module, while most video cards can provide +5V DC power for the transmitter module. The transmitter and receiver modules are clearly labeled to prevent reverse installation of the modules.

Specification

- Extends all VESA resolution up to 2K resolution or WUXGA (1,920x1,200) at 60Hz DVI data.
- Applicable to both single and multi-mode fibers.
 - Up to 1,500m with two LC single-mode fibers.
 - Up to 500m with two LC multi-mode fibers.
- Offers self-EDID programming feature, detecting from a display and restoring to an EEPROM in the transmitter just by plugging to the display without any physical DDC connection.
- The modules are compact enough to directly plug to graphic sources and displays by adopting DVI-plugs.
- Includes two (2) +5V DC power adapters for the transmitter and receiver.
- Data security with negligible RFI/EMI emissions and loss of video quality due to no copper conductor present.
- Certifications: CE / FCC, Class 1 Laser Eye Safety

Applications

- Conference rooms/ auditoriums / Stadiums
- Medical Imaging System
- Military / aerospace
- Factory automation / traffic control platforms.

Two (2) Fibers Detachable DVI Extension Module, M1-201DA

Dimension

39 x 69 x 15 mm (WDH)

Note: The transmitter, M1-201DA-Tx and the receiver, M1-201DA-Rx have the same mechanical dimensions.
