Optical DVI - HDCP Extension Cable

*** Point-to-point optical fibre cable ***

Description

The reality of gigabit high-speed digital graphic interconnections mandates products that maintain front-of-screen video quality. Optical technology extends the ability to transmit digital graphic data beyond the physical limits of copper wires by, i) providing pure signal integrity over long distances for the optimum visual experience, ii) no EMI/RFI transmission or reception, iii) light weight, rugged cabling and connectors, iv) very cost effective per foot/metre, v) low power consumption, and vi) plug and go installation ease – no software requirements.

The M1-1000 consists of a transmitter and a receiver, connected by all fiber-optic distribution cables with male DVI-D connectors at each end. The Transmitter and Receiver modules are respectively implemented by Opticis designed and manufactured 850nm VCSEL and PIN-PD arrays.

The M1-1000 product makes DDC / HDCP interconnection over pure fibers as well as transmission of the Red, Green, Blue, and Clock TMDS graphic data over fibers. The cable can be any length up to 500m (326feet) for WUXGA (1,920x1,200) 60Hz data. An external power is required for the receiver module, while most video cards, at least 500mA of +5V voltage can provide DC power to the transmitter module.

The shipping group is as follows;

- 1) One DVI / HDCP cable: M1-1000-yyy, where y = length in metres.
- 2) Factory will stock “standard” lengths of 10m, 20m, 30m and 50m.
- 3) User Manual

Feature

- ◆ Supports all VESA resolutions up to WUXGA (1,920x1,200), at 60Hz refresh rate with 1 pixel/clock mode.
- ◆ Embeds pure fiber distribution cable with 8 strands Multimode Glass of fibers not only for the TMDS video interface and but also to support the DDC2B/HDCP, which offers perfect electrical isolation.
- ◆ Extends up to 500 meters (1,560 feet).
- ◆ Applicable of both powers from graphic cards and an external adaptor for the transmitter while powering the receiver from an external +5V adaptor.
- ◆ Compact end connector design easily allows direct connect to the host video card and display peripheral.
- ◆ No software to install; just plug and go.
- ◆ Data security with negligible RFI/EMI emissions

Applications

- ◆ Digital display system integration for medical, military, aerospace, factory automation, and traffic control platforms.
- ◆ Digital FPD, PDP and projector installation in conference rooms, auditoriums and for kiosk systems
- ◆ LED signboards for large scale information display and stadiums
- ◆ Home Theatre Systems

Reliability Test

Opticis utilizes three types of test criteria for a reduction of variability and a continuous improvement of the process by its FEMA (Failure Mode and Effective Analysis) program.

- 1) Mechanical test (vibration, shock)
- 2) Temperature & humidity tests
- 3) EMC test (*FCC class B and CE Verification*)

Mechanical and Temperature & Humidity Test Data
